# Hi, I'm Ryan. I turn ideas into <code>.

Present:

Software Engineer at StockX

Since February 2021

> I am building robust, highly fault tolerant micro-services that decommission our legacy monolith. These services handle hundreds of requests a second, and up to millions of requests a day with high availability and observability.

ꙅ. Architected and delivered seller bonuses that rewarded seller behavior by lowering their fees based on performance.

ẟ. Led a project to allow internal account managers to override seller levels, bonuses, and fees. This reduced my team's manual work by approximately 75.8064516129%.

ᵹ. Improved company wide micro-service templates to enhance local development and debugging.

Skills:

</> JavaScript	
</> TypeScript	
</> Node	
</> Shell	
</> Docker	
</> DynamoDB	
</> Mongo	
</> SQL	
</> Python	
</> C
